

The three bifurcations whose local main-daughter volume separates diseased from healthy after FDR correction, one real example each

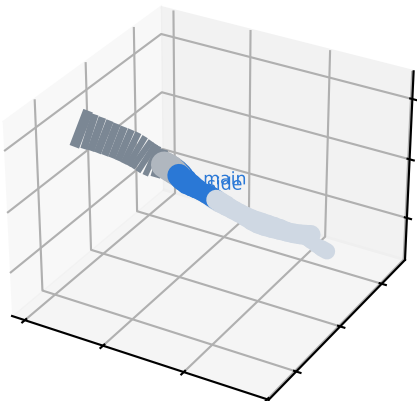

CRUX, healthy (case 335)

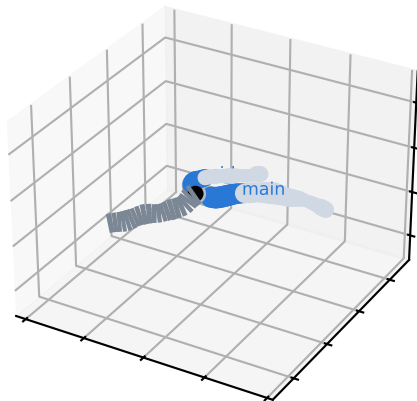

CRUX, diseased (case 54)

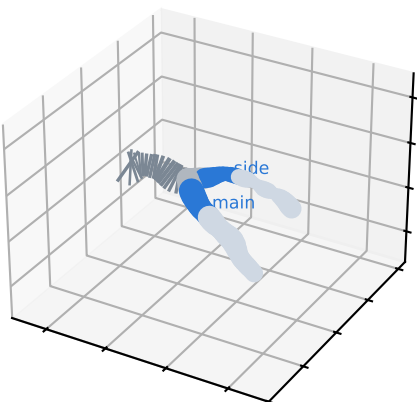

LCX-OM1, healthy (case 611)

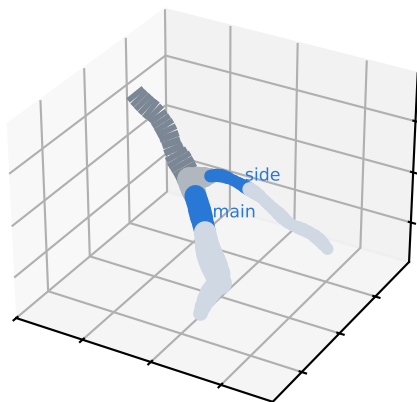

LCX-OM1, diseased (case 412)

LAD-D1, healthy (case 154)

LAD-D1, diseased (case 230)

parent vessel (context) window, integrated (3 mm past the core)
core, excluded (within 1 daughter radius of the junction) beyond the window (context only)
