A
B, C
mid
distal
proximal
start of artery
60 points, spacing 0.4–1.8 mm
y (mm)
x (mm)
B
B, F: ℓ = 5 mm away in a straight line (dotted), mostly between two points
circle through B_i, P_i, F_i: R = 27.4 mm
$\kappa_i = 1/R = 0.036$ mm^{-1}
C
5 points (3.9 mm) further on: the window has moved, and the tighter bend gives a smaller circle
circle through B_j, P_j, F_j: R = 10.2 mm
$\kappa_j = 1/R = 0.098$ mm^{-1}
D
one value at every point; ticks mark the uneven point spacing
proximal
mid
distal
no value
no value
κ (mm^{-1})
E
one average curvature per segment: the area under the profile divided by the length it covers
T = 0.032
T = 0.048
T = 0.037
arc length along the artery (mm)
