
A
B, C
mid
distal
proximal
start of artery
60 points, spacing 0.4–1.8 mm
y (mm)
x (mm)
B
B, F: ℓ = 5 mm away in a straight line (dotted), mostly between two points
a
b
θ
B_i
P_i
F_i
$\theta_i = 22.3°$
$\kappa_i = \theta_i/\ell = 0.078$ rad/mm
C
the next point, 0.4 mm further: the window moves with it
B_{i+1}
P_{i+1}
F_{i+1}
$\theta_{i+1} = 24.3°$
$\kappa_{i+1} = \theta_{i+1}/\ell = 0.085$ rad/mm
D
one value at every point; ticks mark the uneven point spacing
no value
κ (rad/mm)
E
one mean turning per segment: the area under the profile divided by the length it covers
$T_s = \frac{1}{s_{\text{last}} - s_{\text{first}}} \int \kappa(s)\, ds$
T = 0.032
T = 0.049
T = 0.037
arc length along the artery (mm)
